Professional Summary | Graduate student in Data & Computational Science at UCD with proven experience in machine learning, predictive modeling, and reproducible analytics pipelines using Python and R. Achieved Top 2 national hackathon rankings for developing deep learning classifiers and time-series forecasting models, applying statistical rigor and real-world impact aligned with Eaton's mission of intelligent, sustainable innovation.

Education

UNIVERSITY COLLEGE DUBLIN

Dublin, Ireland

Masters in Data and Computational Science

Sep 2025 – Sep 2026

- Applying advanced mathematics and machine learning to enhance AI model reliability and predictive performance
- Elected Class Representative (300+ peers), driving data-informed curriculum improvements and research engagement

KONGJU NATIONAL UNIVERSITY

Kongju, South Korea

Bachelor in Computer Education, Applied Mathematics | First-Class Honours (1:1)

Mar 2021 – Feb 2025

- Designed and delivered a 1-month Python & Algorithms course at Brebeuf College (Toronto, Canada), teaching 70+ students; recognised for communication and learner engagement
- Served as Teaching Assistant for "AI Convergence Education" course, mentoring 2nd-year students on scikit-learn pipelines and reproducible ML workflows for higher model accuracy

CHARLES III UNIVERSITY OF MADRID

Madrid, Spain

Exchange in Data Science and Engineering

Aug 2023 – Aug 2024

- Applied statistical modelling, optimisation, and data visualisation to real-world projects, including EU oil transport cost minimisation and a Spotify recommendation dashboard using content-based and collaborative filtering
- Organised networking and technology seminar events with Microsoft, Google, and 4 other companies as a member of the Business Analytics Association in UC3M

Experience

SK ENMOVE

Seoul, South Korea

Project Intern

Apr 2025 – Jul 2025

- Led 25+ AI/Digital Transformation consultations across departments, advising on IoT sensor data analytics, workflow automation, and RAG-based chatbots
- Developed an ESG Policy RAG chatbot and authored the company's LLM prompt engineering and hallucination-mitigation guide, standardising responsible AI use

OUTTA

Spain, South Korea, Canada, US

Chief Operating Officer, Deep Learning Mentor

Jun 2022 – Aug 2024

- Co-founded global AI education NPO, scaling to 900+ applicants in 2 weeks via A/B-tested campaigns and data-driven targeting
- Mentored cohorts using reproducible ML notebooks (pandas, NumPy, scikit-learn; intro TensorFlow/PyTorch), and template ML pipelines lifting course completion & CSAT by 20%

THE ANKH

Seoul, South Korea

Data Analyst

Jun 2021 – Jun 2023

- Automated reservation and analytics workflows in Python + SQL, increasing operational efficiency by 35% and reducing manual reconciliation time
- Created ETL workflows and sentiment-analysis dashboards, cutting report turnaround from 3 days to hours

Projects

Agriculture Price Forecast (Ranked in the Top 20 out of 1655, National Hackathon)

- Achieved 0.0886 NMAE using a Lasso linear model, outperforming LSTM and tree-based models (XGBoost, CatBoost) by integrating financial features into a reproducible predictive pipeline

Sketch Image Classification System (Secured 2nd Place, National Hackathon)

- Achieved 81% accuracy (0.61 F1) with a VGG16-based model, enhancing results through focal loss, DBSCAN/Agglomerative clustering for noise reduction, and reproducible PyTorch pipelines for preprocessing and tuning
